

ADAPTIVE EQUIPMENT PROCESS

Our team works with you to determine the best equipment and setup for YOU. We work with the installers to ensure a good fit for YOUR VEHICLE.

STEP 1 - EVALUATION

Complete a comprehensive Driver Evaluation with our experts.

Our experts help determine the potential for use of adaptive equipment and estimate the training and equipment needs of the individual.

STEP 2 - TRAINING

Our team will work with you and the physician to submit a request to the Department of Driver Services (DDS) to approve the use of this equipment. This process can be lengthy as we wait for next steps from the DDS to complete testing.

We will provide you with the needed paperwork. You complete page 1 of form and then submit entire packet to physician.

Your doctor **MUST** submit the paperwork for you to DDS.

THE GOOD NEWS

You can work with our team at Adaptable Driving to prepare for the test and gain skills training with us while we wait for approval.

STEP 3- EQUIPMENT INSTALL

Once your training is complete we will write a prescription for the needed equipment and provide you with a list of mobility equipment installers. Let us know when your equipment install is scheduled and we will make every effort to provide a virtual or in person fitting of the equipment.

STEP 4- LICENSING

When you receive a letter from the DDS it will instruct you to schedule an appointment with DDS for a road test. This test will allow your restrictions to be updated.

****You can also hire us to go with you and complete the testing in our car if you have not had your equipment installed yet.**
